

SOFTWARE ENGINEER

CS Student | AI/ML - Backend Systems - Full-Stack Development

Placeholder resume - personal details intentionally omitted.

SUMMARY

- Software engineer focused on scalable systems, intelligent applications, and polished UX.
- Experience across ML infrastructure, distributed backends, and full-stack products.

EXPERIENCE

Software Engineer - AI Infrastructure Startup 2025 - Present

- Built an LLM inference gateway with adaptive routing; cut token spend by 40%.
- Shipped streaming guardrails and a semantic cache serving 1.2k requests/second.

Backend Engineer - Cloud Platform Team 2024 - 2025

- Raft-backed job orchestrator delivering exactly-once execution at 2M+ jobs/day.
- Reduced tail latency 35% by redesigning the queue sharding strategy.

Machine Learning Engineer - Computer Vision Lab 2023 - 2024

- Fused detection, tracking, and segmentation into a sub-30ms streaming pipeline.

SELECTED PROJECTS

- Aperture - real-time computer-vision pipeline (PyTorch, ONNX Runtime, gRPC, CUDA).
- Helix - fault-tolerant distributed task orchestrator (Go, Kubernetes, PostgreSQL).
- Atlas - semantic search over 4M+ documents at 92ms p50 (FastAPI, LLMs, ClickHouse).

SKILLS

Languages: Python, Go, TypeScript, Java, JavaScript

Backend: FastAPI, Flask, gRPC, REST APIs, Microservices

AI/ML: PyTorch, OpenCV, Computer Vision, LLMs, Vector Databases

Infrastructure: Docker, Kubernetes, CI/CD, Cloud, Git

Frontend: React, Next.js Database: PostgreSQL, ClickHouse, Supabase

EDUCATION

B.S. Computer Science - University 2021 - 2025
